- The external library @react-navigation/native was added (version ^7.1.8).
- The external library expo was added (version ~54.0.36).
- The external library expo-constants was added (version ~18.0.13).
- The external library expo-font was added (version ~14.0.12).
- The external library expo-haptics was added (version ~15.0.8).
- The external library expo-image was added (version ~3.0.11).
- The external library expo-linking was added (version ~8.0.12).

- The external library expo-router was added (version ~6.0.24).
- The external library expo-splash-screen was added (version ~31.0.13).
- The external library expo-status-bar was added (version ~3.0.9).
- The external library expo-symbols was added (version ~1.0.8).
- The external library expo-system-ui was added (version ~6.0.9).
- The external library expo-web-browser was added (version ~15.0.11).
- The external library react was added (version 19.1.0).
- The external library react-dom was added (version 19.1.0).
- The external library react-native was added (version 0.81.5).
- The external library react-native-gesture-handler was added (version ~2.28.0).
- The external library react-native-worklets was added (version 0.5.1).
- The external library react-native-reanimated was added (version ~4.1.1).
- The external library react-native-safe-area-context was added (version ~5.6.0).
- The external library react-native-screens was added (version ~4.16.0).
- The external library react-native-web was added (version ~0.21.0).
- The development tool @types/react was added (version ~19.1.0).
- The development tool typescript was added (version ~5.9.2).
- The development tool eslint was added (version ^9.25.0).
- The development tool eslint-config-expo was added (version ~10.0.0).
- The start command of the project was added.
- The reset project command of the project was added.
- The android command of the project was added.
- The ios command of the project was added.
- The web command of the project was added.
- The lint command of the project was added.
- A new collapsible component in the screen area was added; it provides collapsible.
- A new icon symbol component in the screen area was added; it provides icon mapping, icon symbol name and icon symbol.
- A new layout screen in the tabs area was added; it provides tab layout.
- A new icon symbol ios component in the screen area was added; it provides icon symbol.
- A new modal screen was added; it provides modal screen.
- A new external link component was added; it provides props and external link; it uses the expo os setting.
- A new layout screen was added; it provides root layout.
- A new shared logic for color scheme web was added; it provides shared logic for color scheme.
- A new shared logic for theme color was added; it provides shared logic for theme color.
- A new hello wave component was added; it provides hello wave.
- A new haptic tab component was added; it provides haptic tab; it uses the expo os setting.
- A new themed view component was added; it provides themed view props and themed view.
- A new eslint configuration was added.
- A new shared logic for color scheme was added.
- 1 dependency lock file was added.
- 3 written documentation files were added.
- 5 settings and data files were added.
- 1 other file was added.
- 10 image files were added in the images area.

Impact

- Before deploying, the expo os setting must be configured on the server.
- External libraries changed, so they must be installed again and the application rebuilt before deploying.
- Build or deployment settings changed, so the build and the deployment should be checked.
